WHAT THIS IS

Certification your company pays for once

CareerCraft Labs runs **125 skill certifications**. Each is a timed, camera-proctored exam ending in a certificate that carries a QR code anyone can verify against our records — a client, an auditor or a hiring manager, with no account and no login.

The offer in three lines

You buy seats. One seat covers **2 certifications for one employee** at **Rs 400** — that is **Rs 200 a certification**, against Rs 999 for an individual buying one.

You buy the number you need. From 10 seats (Rs 4,000) up to 500 on a card, by the exact headcount — no bundles to round up to. Nothing expires and there is no subscription.

Your brand is on the credential. Upload your logo once and every certificate your team earns carries your logo and company name, on the paper and on its public verification page.

What a team of any size costs

Employees	Certifications	You pay	Per certification	Same at list price
10	20	**Rs 4,000**	Rs 200	Rs 19,980
25	50	**Rs 10,000**	Rs 200	Rs 49,950
50	100	**Rs 20,000**	Rs 200	Rs 99,900
100	200	**Rs 40,000**	Rs 200	Rs 199,800

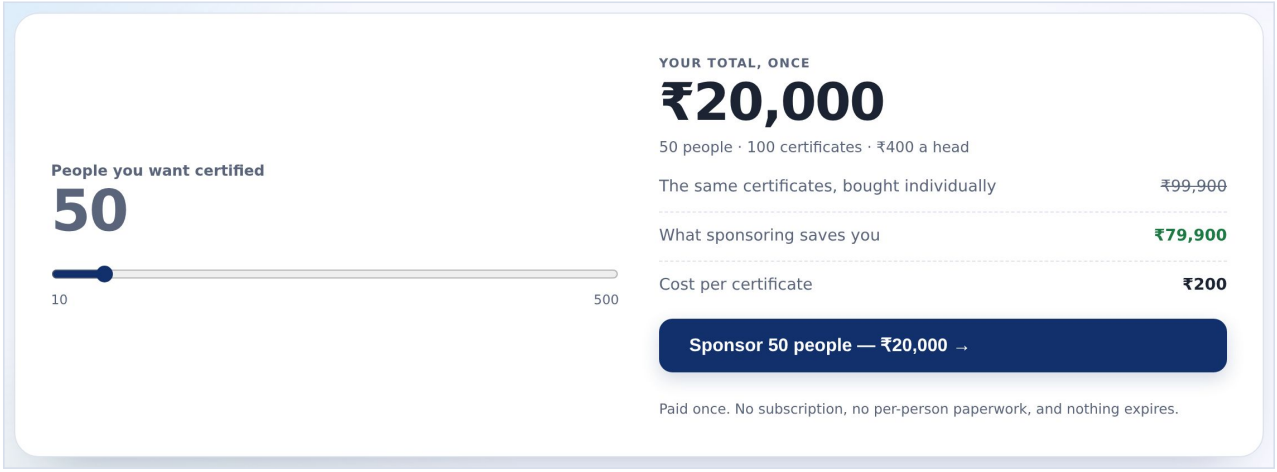

Worked from the live price list. The per-employee price is flat at every size — a 10-person team pays the same Rs 400 a head as a 500-person one.

The certifications and study material are designed by industry experts working at Google, Capgemini, Tech Data, Nagarro, Chandigarh University and Saksoft. *(Company names indicate where our subject-matter experts are employed; they are not sponsors of CareerCraft Labs.)*

1 Buying seats

Two minutes, a card or an invoice, and a GST bill either way

Open **careercraftlabs.org/corporate-ai-certification** and move the slider to your team size. The page works out the total, the cost per head, and what the same certificates would cost bought one at a time.

The calculator. Every figure is computed from the live price list — this guide and that page cannot disagree.

Paying by card

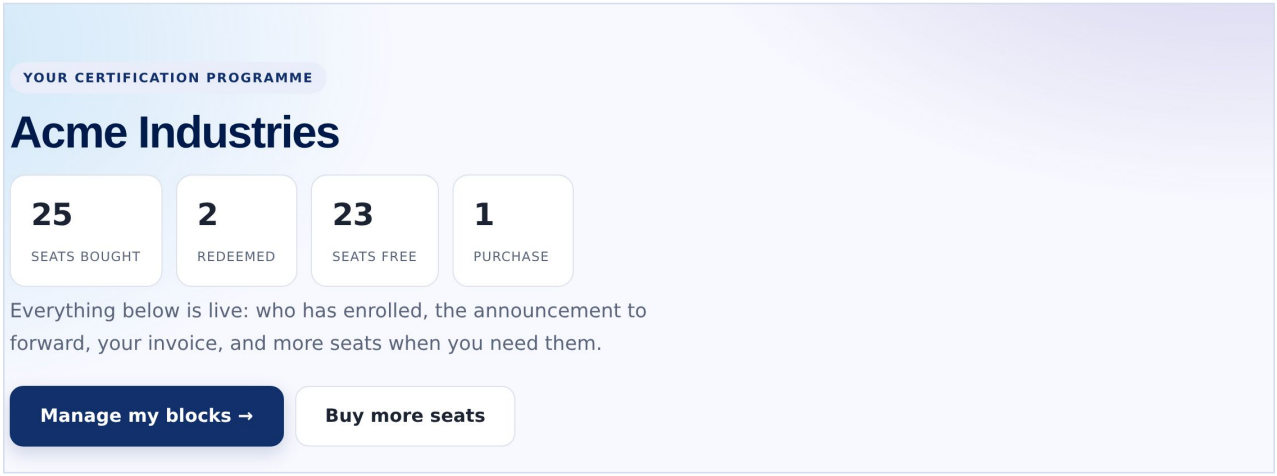

Enter your company name, pay, done. Anything from 10 to 500 seats goes through self-serve checkout. Nothing is issued until the payment clears; a GST tax invoice from AI Wizard Private Limited is produced the moment it does.

Paying by invoice

Above 500 seats, or if procurement needs a purchase order first, use the enquiry form on the same page — or write to partners@careercraftlabs.org. We raise a proforma invoice and issue the code on payment.

The moment the payment clears

The page you bought from becomes your dashboard. No separate admin console to log into, no invitation to wait for.

The buyer's view straight after payment: seats bought, seats redeemed, seats free.

2 Co-branding

Your logo on the certificate — included, not an upsell

This is the part most buyers do not expect. **Every certificate your team earns is issued under your brand.** Upload your logo once, at checkout or any time after, and it is printed where our partner mark appears — on the certificate itself and on the public verification page the QR code opens.

The same certificate, ours above and a sponsor's below — real documents from the real generator, watermarked SPECIMEN. "Acme Industries" is fictional; a customer's mark on a specimen would read as a claim we have not earned.

Why it is worth having

Every certificate an employee posts on LinkedIn, attaches to a proposal or shows a client carries your name as the company that paid for their skills. A training budget usually buys attendance; this buys a document with your logo on it that outlives the training.

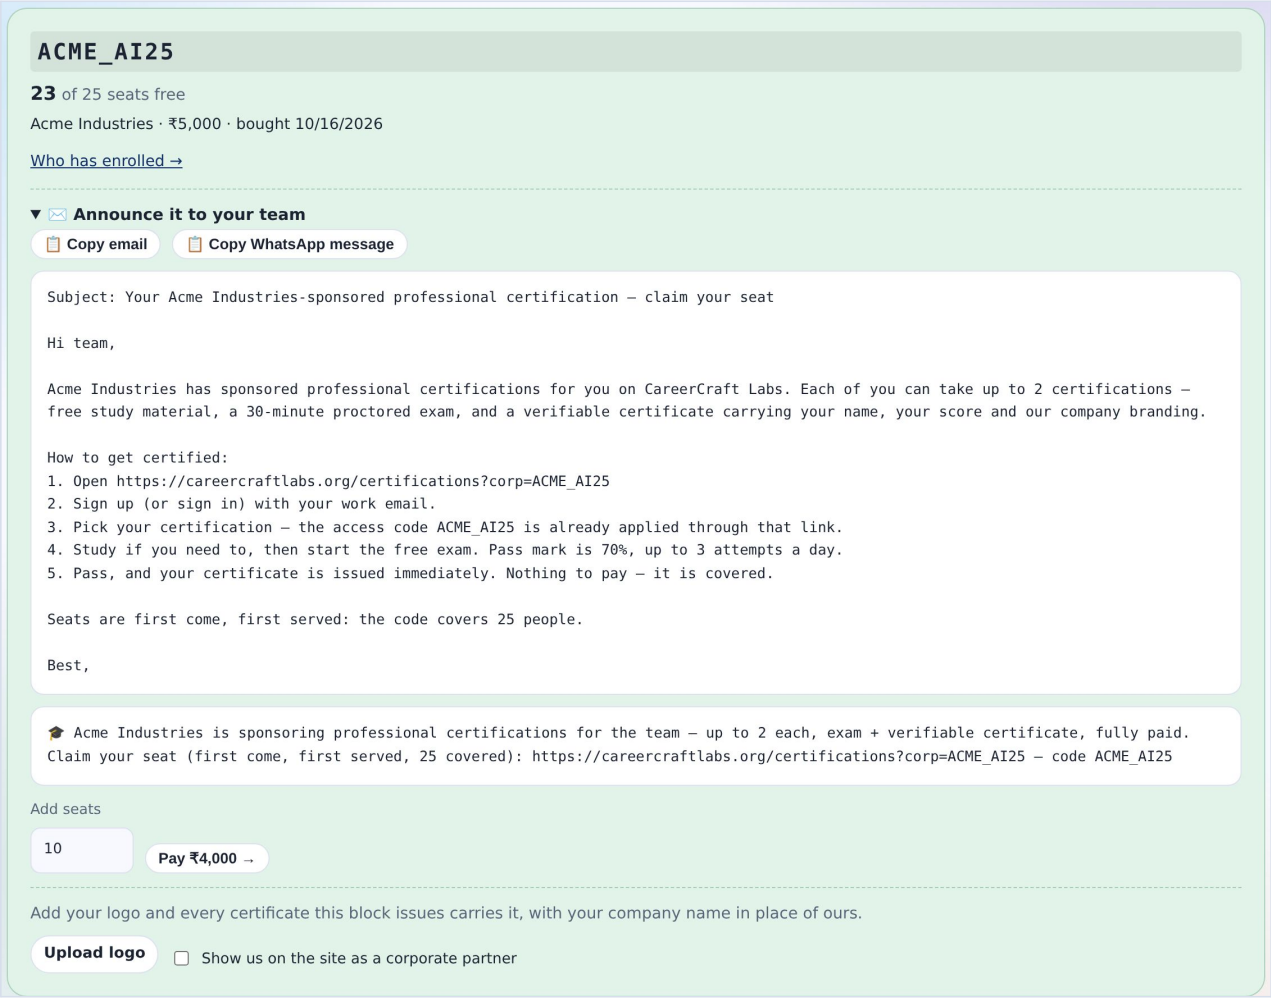

How to set it up

Upload logo sits on your block, next to the announcement — a PNG or JPG, and the company name as you want it printed. Certificates issued after that carry it. Showing your company as a partner on our own site is a separate tick-box, off unless you choose it.

3 Sharing it with your team

One code, one email, no per-person admin

Your block carries the access code, the live seat count, and — written for you — the announcement to send. **Forwarding that message is the entire rollout.** There is no per-person onboarding, no licence assignment, no seat allocation and nothing for IT to install.

The block, with the announcement opened. Copy it as an email or as a WhatsApp message — the code and the sign-up link are already filled in. "Acme Industries" is a fictional company on a throwaway database; the screen is the real one.

What your team has to do

Open the link, sign in with their work email, pick a certification. The code travels in the link, so most people never type it. Each person can take 2 certifications from 125 tracks.

Nothing expires

Seats sit in your block until somebody uses them. A code sent in March is still good for the person who joins in September, and unredeemed seats are never lost.

4 How an employee redeems it

Code, sign in, pick a track

What the employee sees: the code accepted, and who is sponsoring them.

They enter the code, sign in or make a free account, and choose from the catalogue of 125 tracks. They pick their own — a data analyst and a sales manager will not want the same certification, and making L&D; decide for each person is the administrative cost this design exists to avoid.

The one rule worth knowing

A seat is consumed when an employee **first redeems** the code — not when they pass. So somebody who fails and retakes costs you nothing extra, and the 2 certifications are theirs to use whenever they are ready.

What your team will ask you

“It says the code is not valid”

Almost always one of two things: the block is out of free seats, or they have already redeemed a seat on another company's code — one person is one seat, wherever it was bought. Your dashboard shows the free count live.

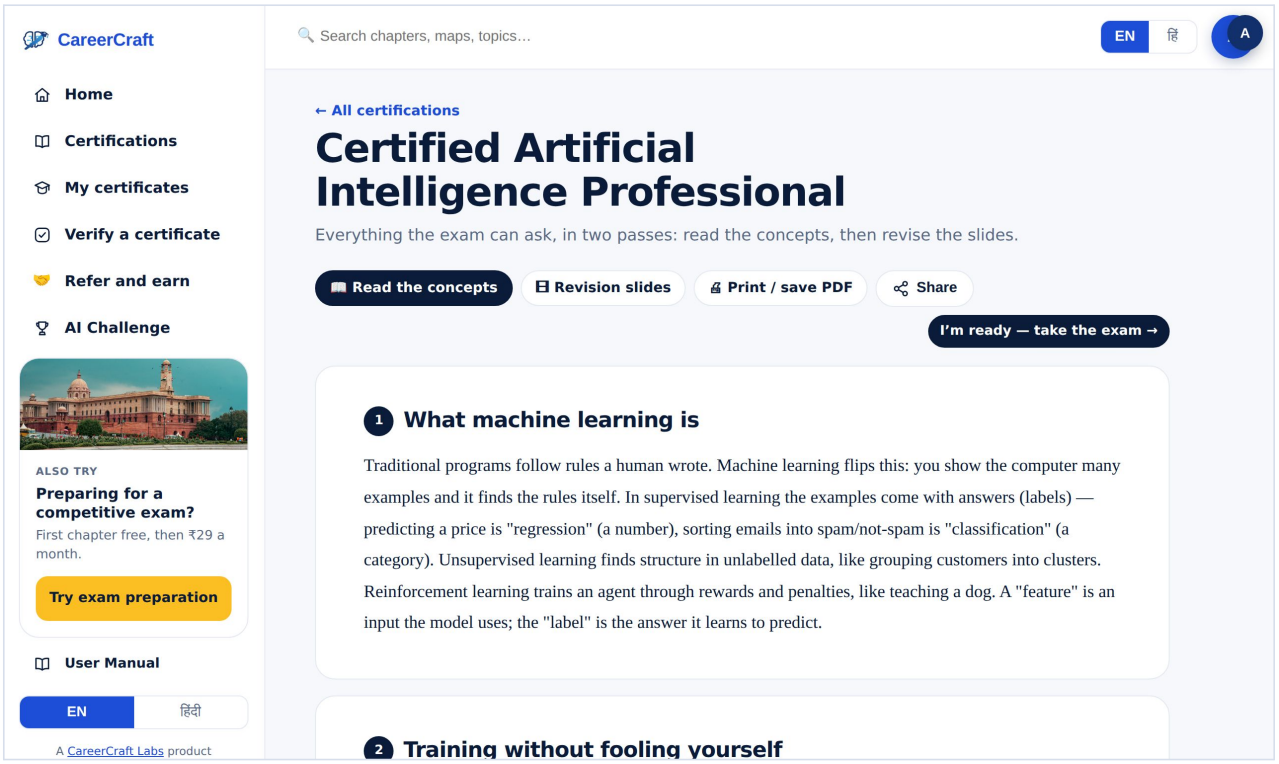

“Can I use my personal email?”

Yes. The certificate belongs to the person, not the address, and they keep it if they leave. Most companies ask for the work email anyway so the roster is readable.

5 Studying — free, and two ways

Concept notes to learn from, slides to revise from

Every certification has a study page with two passes over the same syllabus: plain-language **concept notes** covering everything the exam can ask, and **revision slides** for the morning of. Both are free, both work on a phone, and both print or save as PDF.

The study page: read the concepts, then revise the slides.

Concept notes

Written to be read, not sat through. No video to watch at 2x and no course to schedule — most candidates study for a few hours and take the exam the same week.

Revision slides

The same material compressed to what is worth holding in your head an hour before the exam. This is the pass employees actually repeat.

6 The exam

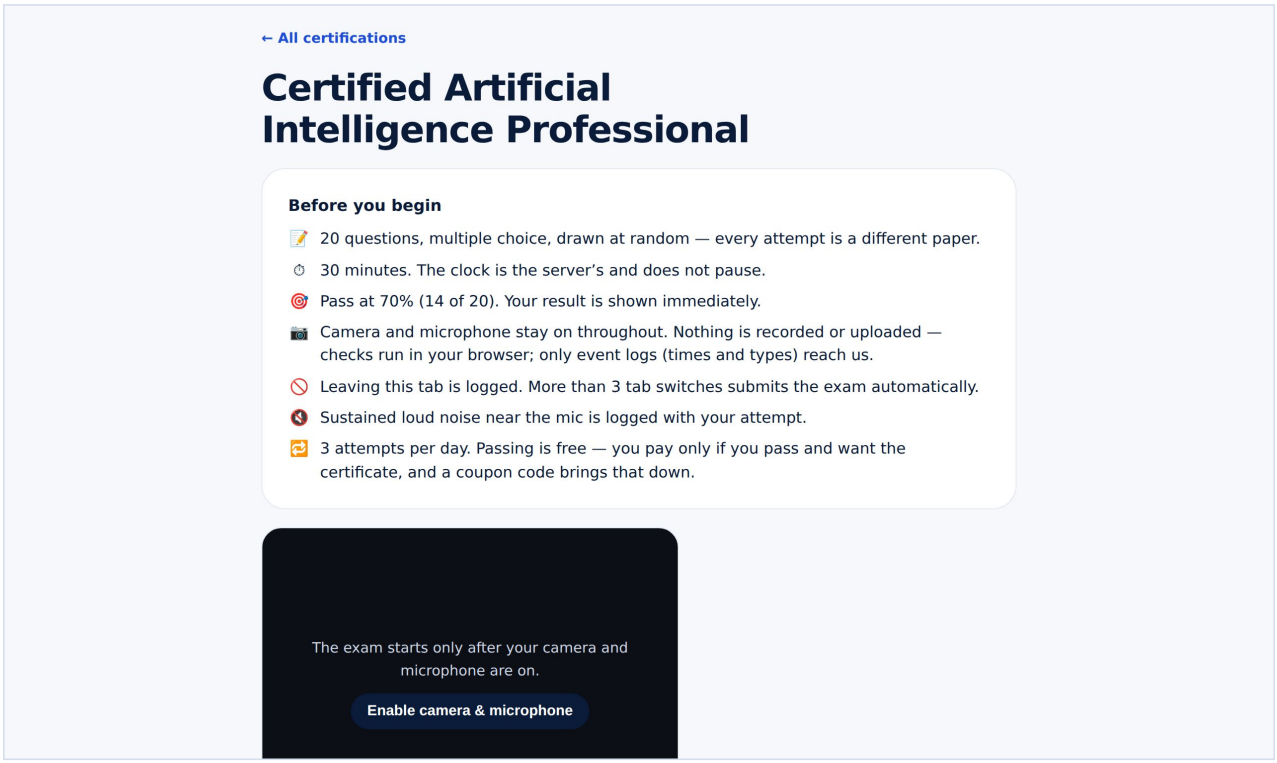

Timed, proctored, and private by design

20	30 min	70%	3 a day
questions, drawn at random	on our clock	to pass	attempts, free

Every attempt is a different paper — 20 multiple-choice questions drawn at random from a much larger bank. The result is shown immediately, and passing issues the certificate on the spot.

Proctoring that respects privacy

The camera and microphone stay on for the duration, and **nothing is recorded or uploaded**. The checks run inside the browser; only event logs — times and types — reach our servers. Leaving the exam tab is logged, and more than three switches submits the paper. Employees can be told this honestly, which matters when the person being watched is your own staff.

Before the exam: the format, the rules and the camera check.

7 The certificate

Issued instantly, verifiable by anyone, forever

Specimen only. A real certificate carries the candidate's name and a QR that resolves to their verification record. Issued by CareerCraft Labs in association with AI Wizard Private Limited.

Anyone can check it

The QR opens a public verification page showing the name, the certification, the score and the date, straight from our records. No login, no account, nothing to install — which is what makes it worth something to the client your employee shows it to.

You get the reporting

Your dashboard shows, per person: who redeemed, which certifications they took, exam outcomes and every certificate issued — with the date they joined. The L&D; report writes itself.

8 After the sponsored certifications

What happens when somebody wants a third

An employee's seat covers 2 certifications. Some people will want more — the ones you most want to keep, usually — and the answer is not a wall.

They continue at the corporate rate

Anyone who holds a sponsored seat keeps a permanent corporate rate of **Rs 399** a certification instead of Rs 999. The app shows them the discount code from their first claim — before they run out, not after — so nobody meets a wall with a door added later. They pay for these themselves; you are not billed.

Or you top the block up

If a whole team wants more, buy additional seats. They merge into your existing block and the existing code — same code, more seats, one invoice trail. There is no upgrade path to negotiate because there was never a plan.

Questions we are asked before buying

Do unused seats expire?
No. There is no expiry date and no subscription. A seat sits in your block until somebody redeems it.

What if an employee leaves?
A redeemed seat belongs to the person who earned the certificate — the credential is theirs. An unredeemed seat is still yours and can go to their replacement.

Can we choose which certifications the team takes?
Employees pick from all 125 tracks. If you want the team pointed at a specific set, say so in the announcement email — the code does not restrict tracks.

Is there a minimum?
Rs 4,000 — 10 seats, 20 certifications. A smaller team can still buy the 10-seat block and keep the spare seats for new joiners — seats never expire.

Do you need our employee data?
No. Employees create their own accounts with their work email; we never ask you for a staff list, and there is nothing to upload.

9 Start with one team

The smallest sensible block, and what it buys

Rs 4,000	20	Rs 200	Rs 19,980
for 10 employees	certifications	each	the same at list price

A 10-seat block is **Rs 4,000** — 20 certifications for roughly what 4 would cost bought individually. Paid once. Nothing expires. Every certificate carries your logo.

Three ways to start

1 · Buy online now. careercraftlabs.org/corporate-ai-certification — slider, card, code in two minutes.

2 · Ask for an invoice. The enquiry form on the same page, or partners@careercraftlabs.org. Tell us the headcount and we will send a proforma.

3 · Pilot it. Buy the minimum block for one team, see the certificates come back with your logo on them, and decide about the rest of the company afterwards.
